

General

Guideline Title

Best evidence statement (BEST). Care of adults with congenital heart disease.

Bibliographic Source(s)

Cincinnati Children's Hospital Medical Center. Best evidence statement (BEST). Care of adults with congenital heart disease. Cincinnati (OH): Cincinnati Children's Hospital Medical Center; 2012 Dec 3. 5 p. [8 references]

Guideline Status

This is the current release of the guideline.

Recommendations

Major Recommendations

The strength of the recommendation (strongly recommended, recommended, or no recommendation) and the quality of the evidence (1a to 5b) are defined at the end of the "Major Recommendations" field.

It is recommended that cardio-thoracic surgery and other cardiovascular procedures for adults with congenital heart disease (ACHD) patients be performed in an ACHD regional center which may be established in a pediatric facility, adult facility, combined or freestanding unit (American College of Cardiology, 2001 [5a]; Warnes et al., 2008 [5a]; Murphy, 2003 [5a]; Landzberg et al., 2001 [5a]; Deanfield, 2003 [5a]; Ochiai et al., 2011 [5a]; Webb, 2010 [5a]).

Definitions:

Table of Evidence Levels

Quality Level	Definition
1a† or 1b†	Systematic review, meta-analysis, or meta-synthesis of multiple studies
2a or 2b	Best study design for domain
3a or 3b	Fair study design for domain
4a or 4b	Weak study design for domain
5a or 5b	General review, expert opinion, case report, consensus report, or guideline
5	Local Consensus

†a = good quality study; b = lesser quality study

Table of Recommendation Strength

Strength	Definition
It is strongly recommended that. . . It is strongly recommended that. . . not. . .	There is consensus that benefits clearly outweigh risks and burdens (or visa-versa for negative recommendations).
It is recommended that. . . It is recommended that. . . not. . .	There is consensus that benefits are closely balanced with risks and burdens.
There is insufficient evidence and a lack of consensus to make a recommendation. . .

Physicians

Guideline Objective(s)

To evaluate, among healthcare facilities, and its healthcare providers; performing cardio-thoracic surgery and other cardiovascular procedures for adults with congenital heart disease (ACHD), if care provided at a pediatric facility versus care provided at an adult facility, leads to better patient outcomes

Target Population

Adults with congenital heart disease, 18 years of age and older, who require cardio-thoracic surgery, and other cardiovascular procedures specific to their congenital heart defect

Interventions and Practices Considered

Cardio-thoracic surgery and other cardiovascular procedures for adults with congenital heart disease (ACHD) provided at a pediatric facility versus at an adult facility

Major Outcomes Considered

- Post-operative mortality rate
- Adverse events

Methodology

Methods Used to Collect/Select the Evidence

Searches of Electronic Databases

Description of Methods Used to Collect/Select the Evidence

Search Strategy

- Databases Searched: Scopus
- Search Terms: congenital heart defects; cardiac patients, hospital, adult and child; pediatric nursing, adult care; congenital heart disease, adult and pediatric facility; ACHD, congenital heart surgeon, adult heart surgeon
- Filters: English Language
- Last Search: August 17, 2012

It is recommended that... It is recommended that... not...	There is consensus that benefits are closely balanced with risks and burdens.
There is insufficient evidence and a lack of consensus to make a recommendation...	

Cost Analysis

A formal cost analysis was not performed and published cost analyses were not reviewed.

Method of Guideline Validation

Peer Review

Description of Method of Guideline Validation

This Best Evidence Statement has been reviewed against quality criteria by two independent reviewers from the Cincinnati Children's Hospital Medical Center (CCHMC) Evidence Collaboration.

Type of Evidence Supporting the Recommendations

The type of supporting evidence is identified and graded for each recommendation (see the "Major Recommendations" field).

Benefits/Harms of Implementing the Guideline Recommendations

Potential Benefits

Improved patient outcomes such as lower post-operative mortality rate and fewer adverse events

Potential Harms

Not stated

Qualifying Statements

Qualifying Statements

This Best Evidence Statement addresses only key points of care for the target population; it is not intended to be a comprehensive practice guideline. These recommendations result from review of literature and practices current at the time of their formulation. This Best Evidence Statement does not preclude using care modalities proven efficacious in studies published subsequent to the current revision of this document. This document is not intended to impose standards of care preventing selective variances from the recommendations to meet the specific and unique requirements of individual patients. Adherence to this Statement is voluntary. The clinician in light of the individual circumstances presented by the patient must make the ultimate judgment regarding the priority of any specific procedure.

Implementation of the Guideline

Description of Implementation Strategy

An implementation strategy was not provided.

NGC Status

This NGC summary was completed by ECRI Institute on April 10, 2013.

Copyright Statement

This NGC summary is based on the original full-text guideline, which is subject to the following copyright restrictions:

Copies of this Cincinnati Children's Hospital Medical Center (CCHMC) Best Evidence Statement (BES^t) are available online and may be distributed by any organization for the global purpose of improving child health outcomes. Examples of approved uses of the BES^t include the following:

- Copies may be provided to anyone involved in the organization's process for developing and implementing evidence based care
- Hyperlinks to the CCHMC website may be placed on the organization's website
- The BES^t may be adopted or adapted for use within the organization, provided that CCHMC receives appropriate attribution on all written or electronic documents
- Copies may be provided to patients and the clinicians who manage their care

Notification of CCHMC at EBDMInfo@cchmc.org for any BES^t adopted, adapted, implemented or hyperlinked by the organization is appreciated.
